

SDrive+

Technical Details

Part No: MDU6302

Weight: 23.00 kg

WLL: 150 kg straight / 100 kg curved

Material: Mixed Motor components

Finish: Black Powder Coated (metal work)

The SDrive+ is a sleek all-in-one motor and control unit designed for small venues, studios, and schools. Weighing just 23 kg it's compact and easy to install, making it ideal for tight spaces or quick setups. With a plug-and-play design, the SDrive+ connects directly to a 230 VAC mains supply using either a standard 3-pin plug or by hardwiring.

New in 2025 with slightly larger dimensions than our SDrive base model, the SDrive+ is now equipped with enhanced safety and connectivity as well as a 24 VDC 2 A internal power supply for accessories; emergency stop inputs (compatible with our new E-Stop Box); and a pulley safety guard to help prevent injuries. Control is simple and flexible—supporting up to two wired pendants via 7-pin XLR connections and two track-mounted limit switches via 3-pin XLR. A built-in motor reverse switch allows users to quickly change the direction of travel relative to the open and close buttons.
